

Intramodel Fits: ETORUS

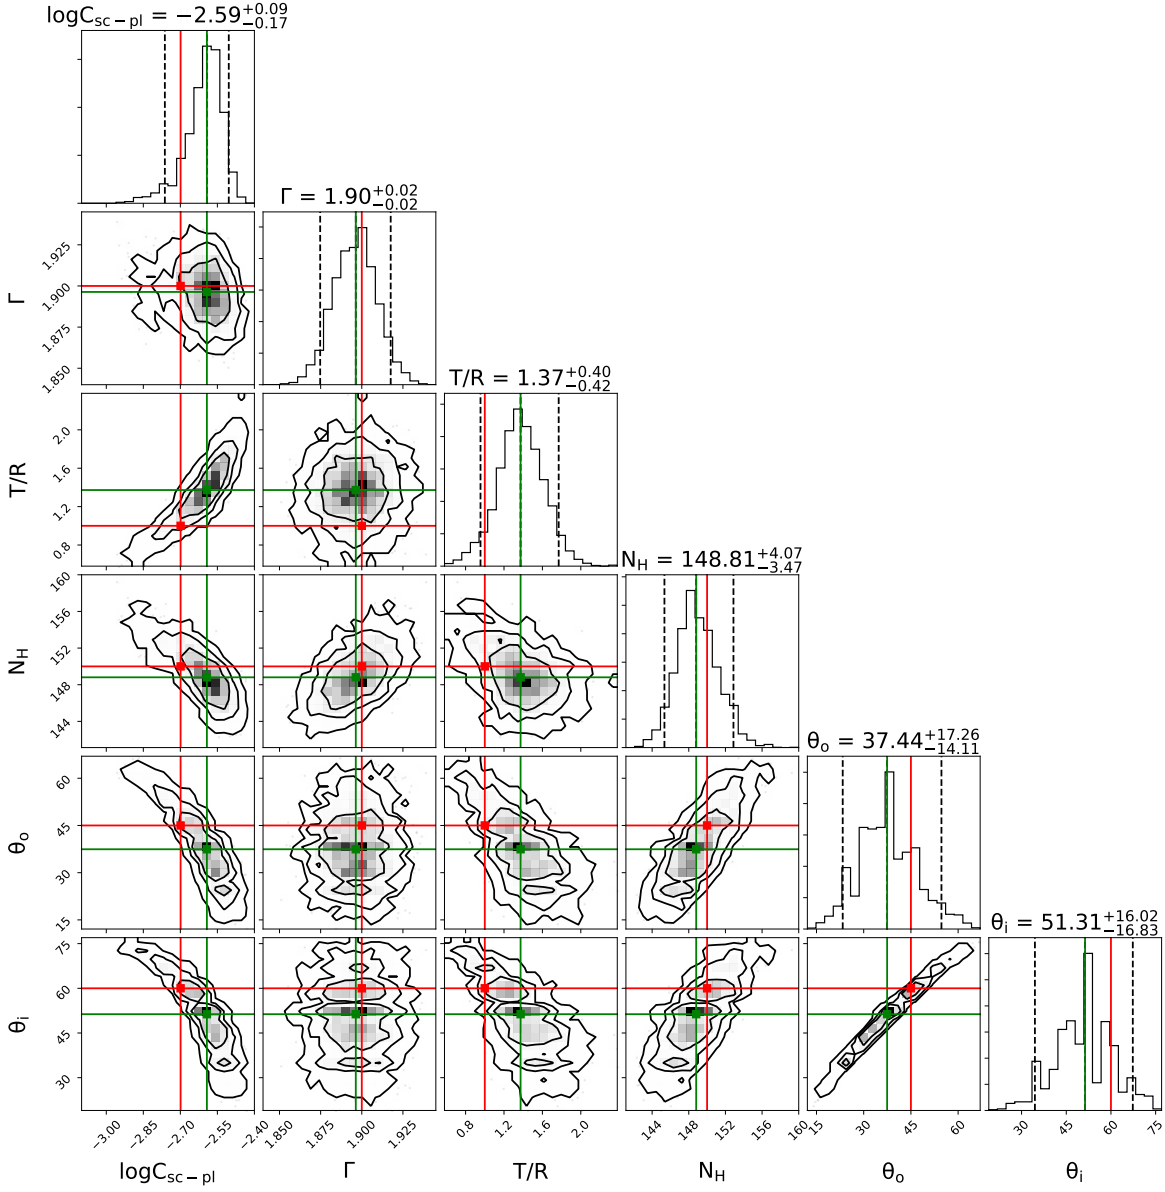

Figure 1: Contours for ETORUS IM analysis in the MCT regime, with $N_H = 150$ as input. T/R is kept free in the fits.

Figure 2: Contours for ETORUS IM analysis in the MCT regime, with $N_{\text{H}} = 150$ as input. $T/R = 1$ (input value) frozen and the posteriors of θ_o and θ_i improved.

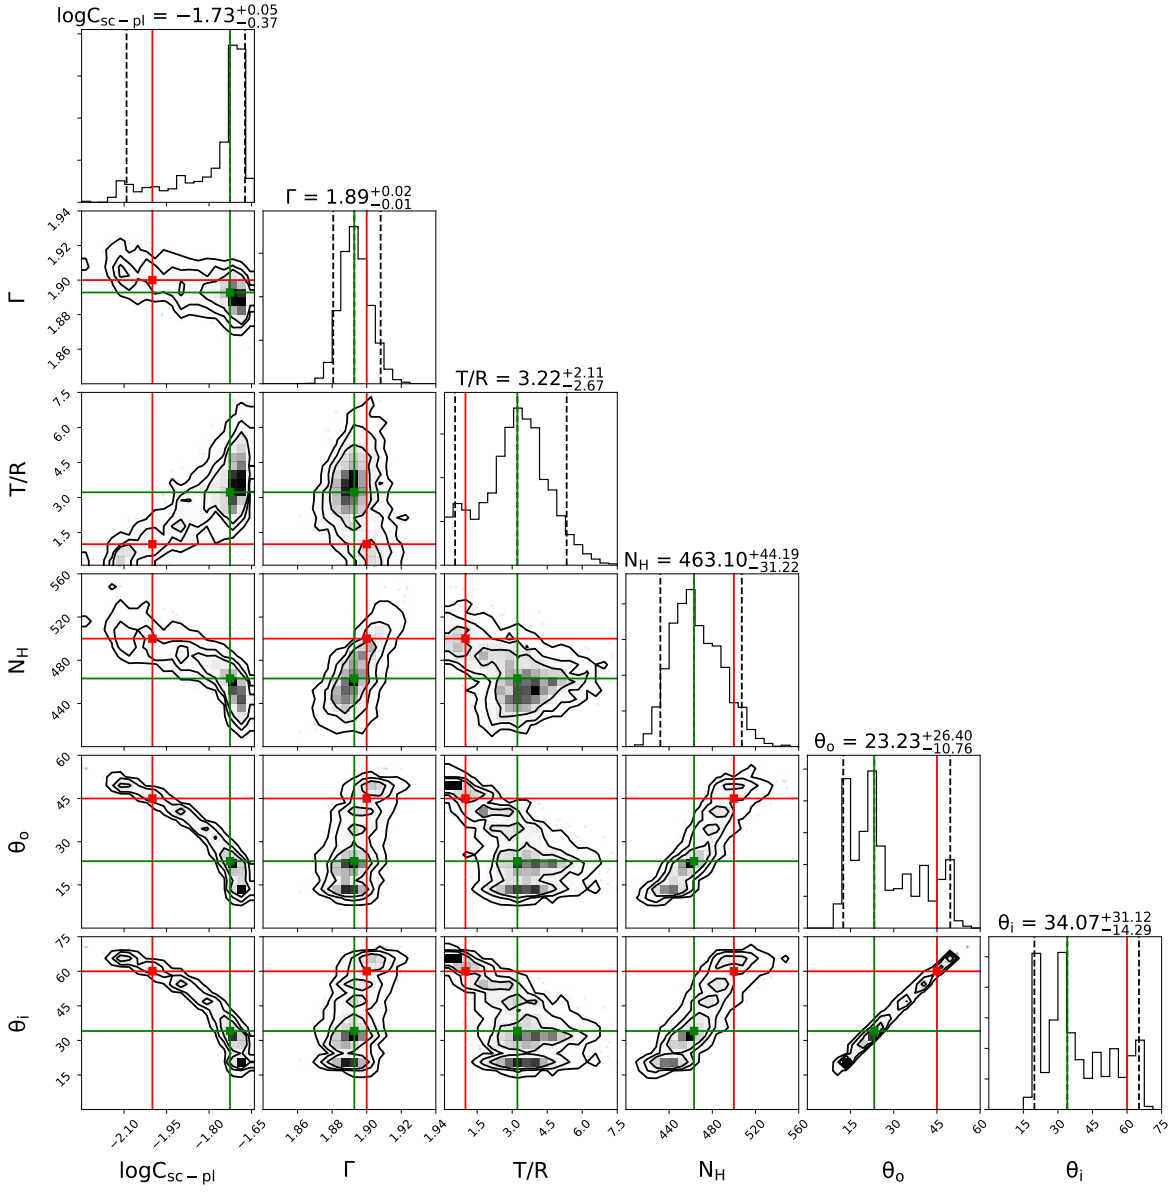

Figure 3: Contours for ETORUS IM analysis in the HCT regime, with $N_H = 500$ as input. T/R is kept free in the fits.

Figure 4: Contours for ETORUS IM analysis in the HCT regime, with $N_H = 500$ as input. $T/R = 1$ (input value) frozen and the posteriors of θ_o and θ_i improved.
